IN THE CLAIMS

1. (Amended) A method of searching for a plurality of information objects comprising:
- selecting a first keyword from a keyword list, wherein the first keyword is part of a first query;
  - automatically expanding the first query to a second query, wherein the second query includes the first keyword and the second keyword, wherein the second key is on the keyword list;
  - searching the database using the second query; and
  - finding a first identifier for a first information object that corresponds to the second query, wherein the first information object is part of the plurality of information objects.
